

We at Mintek Software provide software solutions to local businesses. We create and maintain restaurant's website and can also run SMS marketing campaigns for them. We have been working with an Indian restaurant by the name of Airport Sweets & Tandoori since October 2022.

The below table shows the call breakdown of Airport Sweets and Tandoori from May - November.

7 month overview

As you can see, the restaurant got more calls in the months of October and November compared to previous months. A downward trend could be observed from May - September. The calls increased significantly in October and the growth is being maintained in November. This is the result of the sms marketing that was run for the restaurant.

By analyzing, the call logs of the restaurant I was able to identify the following:

269

CUSTOMERS THAT ORDERED 1 TIME IN OCTOBER

23

Customers that ordered 3 or more times in October

80

Customers that ordered 2 or more times in October

With this information I was able to run different deals for customers depending on their buying pattern. For example, the 23 customers that ordered 3 times or more in October received a text offering only 10% off on their next order compared to 15% that was sent to the 80 customers that ordered only 2 times in October.

This optimization saved the restaurant money as the 18 customers that ordered 3 or more times did not need the additional 5% discount based on their buying pattern. They were already more likely to order from the restaurant compared to customers that ordered once or twice.

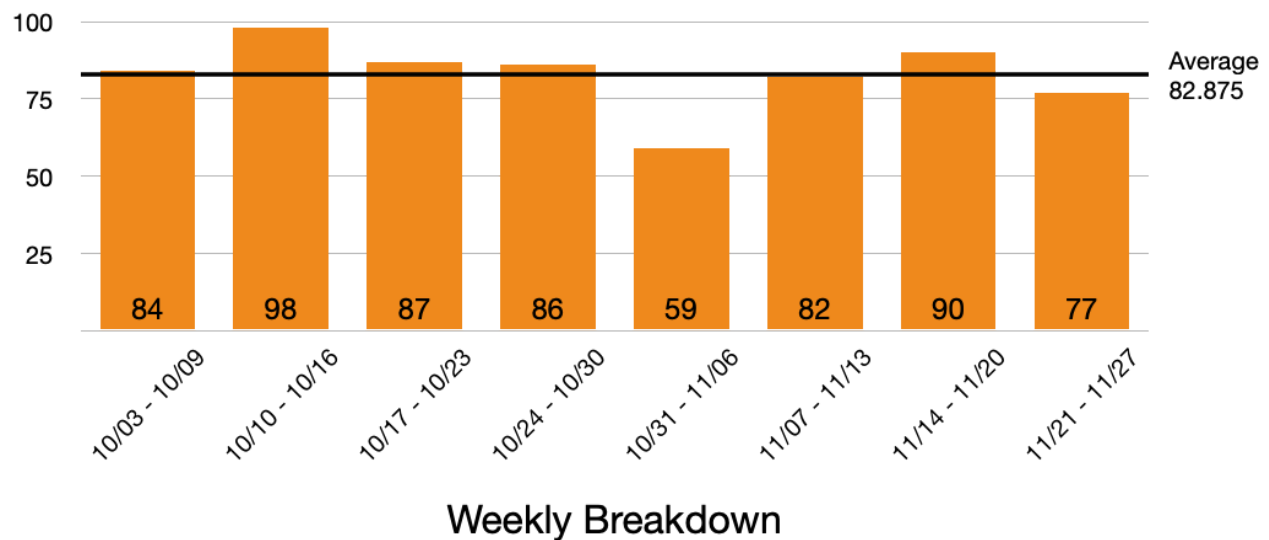

Phone Number	Times Targeted	Orders Made
██████2365	2	4
██████1185	2	0
██████4110	2	5
██████0312	2	1
██████1498	2	0
██████6406	2	2
██████9108	2	0

The above table shows how **loyal customers** (customers that ordered > 4 times) in October reacted when they were targeted in November. Total14 text messages were sent which resulted in 12 orders ~ **87% positive engagement rate**.

173/290

Customers that ordered on days we ran promotion

Furthermore **60% of the customers that ordered 1-2 times** in October placed orders when targeted in the month of November.

Lastly and the most compelling piece of evidence in favor of sms marketing is captured in the above table. It shows a week by week breakdown of answered calls. The weeks where I did not run SMS marketing are easily recognizable i.e. 10/31- 11/06 and 11/21 - 11/27.

If we take a look at the **top 3 weeks** in terms of call volumes. These are the weeks where **SMS marketing was run** and are listed below:

- **10/10 - 10/16**
- **11/14 - 11/20**
- **10/17 - 10/23**

The results of running SMS marketing are quite clear in the case of Airport Sweets and Tandoori. I believe I can help you achieve similar results as well.
